Heinz is part of the expert network of former AZT colleagues (Allianz Center for Technology) and supports the Expert Centre for Technology (EZT) and its customers with his expertise.

Heinz joined AZT in 1988 with a specialization in machine diagnostics and damage investigation.

In 1990, he moved to Stadtwerke München. There, he initially worked as a commissioning engineer for the pulverized coal-fired 1000 t/h steam generator at the Munich North combined heat and power plant. After commissioning, he worked as a production engineer. In 1996, he moved internally to the Technical Management of Munich's inner-city power plants.

Heinz rejoined Allianz Versicherung SE in 1998. He worked in various positions as a claims engineer for national and international clients, mainly in the energy sector. As a group leader, he was responsible for claims processing for technical insurance in southern Germany and the new federal states. For the last 10 years until the end of 2022, he dealt with global claims transactions in the corporate customer sector, especially in the wind-offshore segment.

Heinz completed his mechanical engineering studies as Dipl.Ing. (FH) in 1988 at the University of Applied Sciences in Munich. His focus was on machine diagnostics and measurement technology.
